

BOOM BOOM SPRAY - Foliar Biostimulant

This "rescue and booster spray" for the vegetative stage contains only natural peptides, aminoacids and organic nitrogen that the plant absorbs through the leaves.

Not only is it **fast acting**, but suitable for use with any fertiliser program as well, be it organic, chemical or bio-mineral.

Biostimulant effect

...stimulates plant **growth**, yields and crop **quality**, as well as mineral uptake.

Booster effect

...provides plants with extra **nitrogen** which produces shiny, dark green leaves. It greatly increases the **photosynthetic capacity** of the plant.

Anti-stress effect

...helps plants to **resist and recover** quickly from stressful situations, such as extreme cold or heat, low light levels, dehydration or drought. Its restorative effects can be observed within a very short period.

It contributes to the recovery of mother plants and **cuttings** after manipulation in propagation.
